Mines and Prospects--Furnaces and Mills

WANT A SLICE OF UTAH COPPER

Guggenheim Agent Is Here to Inspect.

A. Chester Beatty Commissioned to Pass Upon Bonanza.

Deal One of the Most Gigantic in State's History-Talk of the Day in Town.

Commissioned by the Guggenheim Exploration company, of which formidable organization he has long been a prominent field representative, A. Beatty will start for Bingham tomorrow morning, and there begin an exhaustive examination of the splendid estate from which the Utah Copper company is now deriving its wealth. The fundamental purpose of this investigation is, perhaps that he may ascertain the extent of the big Utah company's resources and to acquire such data as shall enable the exploration company to intelligently prose-cute negotiations that may and probably will culminate in the purchase of an in terest by the latter in the valuable holdings of the Utah company.

Mr. Beatty, who was interviewed during the afternoon, showed no inclination to withhold anything whatever concerning the purposes that brought him into this commonwealth, and said without hesitation that if it did not result in a direct acquisition of an interest of considerable magnitude in the Utah Copper company, that certainly it would enable company to intelligently decide whether or not it would unite with those in control of this splendid undertaking in providing means with which to consummate plans looking forward to its increased equipment. He is not without a superficial knowledge of the proposition, and is looking forward to his researches to afford him a lesson upon the occurrence of ores at Bingham that could be derived, perhaps, through no other channel. In the negotiations no consideration has yet been advanced by either of the principals, although it can be said that the transaction, if consummated, will involve a larger number of millions than any of the million-dollar ones that have taken place in this commonwealth. T arrive at conclusions such as those ex acted by his company, Mr. Beatty expects to apply himself for at least two weeks in the examination, and if it is necessary extend even that time. An other thing which comes within the range of Mr. Beatty's commission is tha which requires of him computation o ore bodies upon which the American Smelting and Refining company is to rely in the operation of its copper smelter near the point of the mountain, the findings submitted by him to influence to large extent the magnitude of this struc ture. The reception being accorded th distinguished visitor is as cordial as tha which has characterized previous visits and that his sojourn shall be made a pleas ant and instructive one, nothing will b overlooked by mining circles generally Last night he was the guest of Clarence McCornick at an Alta club renast while his moorings during business hour have been established at the offices of the Utah Copper company. Of course Mr. Beatty's findings will be awaited with intense interest by every perso operating in the great camp of copper.

COMES TO MINE.

A Prominent Colorado Miner to Enter the -ocal Field.

Having temporarily suspended operations at the Kelly tunnel, Georgetown, Colo., Benjamin F. Kelly, the founder of that undertaking by which Republican mountain has been penetrated to a distance of 2000 feet, came in from the East yesterday, and accompanied by P. J. Donahue, the expert mining man of this city, will begin a pilgrimage among the various camps of this State. Mr. Kelly has driven some of the longest tunnels has driven some of the longest tunnels in the Western country, and along that particular line of development has a record that is perhaps unequalled. This applies to Colorado at all events, no matter what local talent may have done to equal the visitor's achievements over the line. It was he who incepted the Nelson tunnel at Creede, Colo., and through which the product of no fewer than eight different mines is now being beloed, the long avenue penetrating zone for more than 5000 feet. It is the intention of the visitor to make this city his headquarters, and that he will find something with which to properly engage his talents here as a permanent resident the Colorado contingent has no doubt. Certainly mining circles will afford him every opportunity to acquire something worthy his time and his talent.

Ore and Bullion.

In the ore and builton market the day's settlements amounted to \$74.50, McCornick & Co. reporting them as they follow: Builton, \$38.760; gold, silver, lead and copper ores, \$35,900.

In the metal market silver ruled at 55% cents an ounce, lead at \$3.509.50 per hundred pounds and casting copper at 14% cents a pound.

TEA

Poor tea costs more than good, very likely.

Your green returns your money if you don't like Schilling's Best.

THE DAY ON 'CHANGE.

The Market a Dull One, and Trading

Generally Light. The day's business on the mining exhange was hardly large enough for an consisting of \$5126.87, the shares traded in confined to 10,300. The bear was again in be ascendant, and at intervals ruled with ot a little severity. May Day, a victim of rot a little severity. May Day, a victim of repeated attacks, was again actively shorted, with the last spot delivery taking place at 14½, while Lower Mammoth was sold down to 2½ and Uncle Sam to 8½. Although the shorts had singled it out. New York, which was sold for delivery thirty days later at 50 cents, sped up the pike to 53½, while Sliver Shield was dealt in at 2), the day closing on the following market:

TO REOPEN SCRAP.

Eureka Hill and Beck Companies to Clinch Once More.

The scrap between the Eureka Hill and Bullion-Beck companies, in which the former will seek to sustain a judgment amounting to about \$5,000 against its adversary, will be reopened this morning versary, will be reopened this morning before Judge Varian as referee. The action, which was previously tried before Hon. P. L. Williams, as referee, is one in which the plaintiff seeks to collect damages for ores the respondent is accused of unlawfully extracting from its Tintic mines, and which were fixed by the former referee as having a valuation of about \$55,660. Much interest is manifested in the issue.

Dr. Meyer in Town.

Dr. Franz Meyer, the cumient authority on the utilization of smoke from the smelter stack, has returned from the East and is again devoting himself to experiments at the local furnaces. He has also brought to the atten-tion of those engaged in the reduction of sul-phide ores a new type of furnace, a model of which is being introduced to the metallurgist

Oil Investments Responding Freely

The Valuable Fluid Issuing From Thirty-One Wells, Says Hon. Simon Bamberger.

Hon. Simon Bamberger, one of the piltrims who recently went to Los Angeles to spread before its enterprising citizens some of the resources with which nature has endowed this commonwealth, reappeared at his deak yesterday morning. and says that while he appreciates the enterprise that has made it possible to rear in that country one of the proudest of southern cities, he has no doubt what-ever that the achievements there will be

of southern cities, he has no doubt whatever that the achievements there will be eclipsed by those that are projected here. That Salt Lake valley had become the greatest smelter cetter on earth; that within eighteen months the State would be milling a larger tomage of ore than is reduced by any other State in the sister-hood, and that its agricultural interests were so productive, were conditions that had never been presented to the people of Los Angeles as were they during the recent love-fessat at the latter place. At home Mr. Bamberger proposes to take off his coat and labor to an end that the reception to be given the visitors from Los Angeles on June 12 shall be made just as cordial, just as instructive as was the Sait Laker's visit down there.

Of results with which the Sait Laker has bored for oil upon the margins of Los Angeles. Mr. Bamberger says that thirtyone wells are now pouring, with new ones coming in gradually. This undertaking, founded by Mr. Bamberger and his Sait Lake associates, now constitutes the largest unit in the amaigamated company by which the industry in that region is controlled. Los Angeles is devoting more altention than hitherto to the development of Interests in the mines, and with the sinews furnished by that city added to those that have been long going out of Zion, every camp along the San Padro Route and those toward which its projected extensions are headed will undoubtedly show greater activity than at any period in their career.

GOES TO THE CANYON.

Owners of the Blue Rock Get Services of Tintic Man.

AMERICAN FORK, May 22.-The Paific Gold Mining and Milling company perating the Blue Rock mine in Amercan Fork canyon, have secured the services of John Billings, an experienced nining man of Eureka, to act as timber

mining man of Eureka, to act as timber foreman. Mr. Billings has acted as such in the Continental mines at Eureka for many years back.

John Armstrong, Joseph Burgess and Charles Armstrong, who were working on a fifty-foot contract for the Clipper and Silver King mine, in American Fork canyon, are here, having completed the contract. However, they will secure more supplies and return to the property at once, to continue with other work.

The officers of the Whirlwind mine, located in American Fork canyon, expect some large Tonopah interests here to inspect their property, as well as the canyon in general.

spect their property, as well as the canyon in general.

Manager Harry J. Kruise of the Bogg mine in American Fork canyon, came down from Sait Lake City during the week, where he was called on account of the iliness of his wife, who was compelled to undergo an operation.

George Tyng, of the Wyoming mine, says he will not be able to commence regular shipments of ore until the middle of July. The delay is due entirely to deep snow.

The lims rock quarries and klins lo-

deep snow.

The lims rock quarries and klins located on the mountain a few miles east of here have resumed active operations after a short shut-down. The klins are running full blast, their product finding a ready market.

Messrs. Lemnel Western and the Webb Brothers are preparing to resume operations at the Golden Gem. known as the Cedar Stump discovery.

MR. ECCLES DEPARTS.

Traffic Manager for the American Leaves for the East.

Duties that required his attention in this neck of the woods having been disposed of, S. W. Eccles, vice-president of the American Smelting and Refining company and the gentleman who presides over the big company's traffic department, left for the East yesterday to confer with other members of the official family. With conditions existing in this district Traffic Manager Eccles expressed himself as very much pleased, nor is there any one who appreciates more keenly the liberal attitude of the railways at present toward the mining camps upon which his company is drawing for an unprecedented tomange of ore with which to keep its system of furraces in operation, he says that at no period of their career have they been more productive of wealth, nor have they shown a greater amount of prospecting. Many new camps are now forging their way to positions of prominence in the world of mining, and the output of metallic wealth will undoubtedly show an enormous increase the present year. Mr. Eccles gees direct to New York, where, after a conference with the members of the family circle, he will again take to the road. and the gentleman who presides over the

NEVADA SHIPMENTS.

Consignments for Valley Smelters Via Tonopah Route.

The are shipments over the Tonopah rail read this week aggregated 1800% tons, which forty-one tons came from Goldfield. The shipments are divided as follows: From Tonopah-Tonopah company, 1965 tone; Tono

Tonopah—Tonopah cempany, 19% tons; Tonopah Extension company, 250 tons; Montana Tonopah, 258 tons; Belmont, 115 tons; Midway, 60 tons From Goldfield—Goldfield Ora sampling company, 41 tons. From Reveille—Southwestern Newada Mines company, 21 tons. From Lone Mountain—Nevada Alpine, 29 tons; Dr. G. Schick, 45 ton.

The broad-gauging of the C. & C. has reached the cut-off at Hawthorne, and rails and ties are being distributed between Hawthorne and Sodaville. Broad-gauge lies have been laid on the Tonopah road to a point thirtyone miles this side of Sodaville, and are being laid at the rate of a mile a day. The grading of the Goldfield line has been completed, and the depot site in Goldfield is now being put in condition for the tracks and buildings.—Tonopah Miner.

JACKSON AT HOME.

Former President of Mining Exchange in His Retirement.

After many years of active service with he smelters and the acquisition of a fortune from the mines of Mexico, Maj. J. E. Jackson, a former president of the Salt E. Jackson, a former president of the Salt-Lake mining exchange and resident representative for several years of the Kansas City Refining and Smeiting company, has withdrawn to a life of retirement in a pretty home at Parkville. Mo. He was visited by William H. Tibbals during the latter's recent pligrimage east, and says of his mines in Mexico that they are responding most generously to the minutest need in the house of Jackson. There is always a glad hand awaiting the Major in this neck of the woods,

At Great Depth In Good Springs

Thousand Feet Under Ground Fine Ores Appear-Material on Ground for 'Phone System.

For the first twenty miles of a telephone system that shall enable those desiring to communicate by wire with the sisterhood of camps extending from Good Springs "station" on the San Pedre Route, material is now upon the ground said Harry Joseph, the originator of the system, on his return from the south yesterday, accompanied by David Depue and Willis Booth, who are associated with him. The first twenty-mile section, according to the survey, will extend to Sandy From that station it will be extended to the Potosi mines; thence to Pahrump, Johnnie and Ash Meadows, and on to Rhyolite, where it will connect with the system created by D. H. Peery of this city and Goldfield, and his associates. With this service the miners and merchants of Salt Lake will be permitted to reach the camps whose patronage is so much desired through the quickent medium.

As a route over which to operate the autocar, Mr. Joseph says that extending from Goed Springs to Builfrog is undoubtedly the most practicable.

With others of this city Mr. Joseph has succeeded in buying up a group of most promising locations at Good Springs, that are now being prospected, with quite favorable results. By him the camp is exteemed as one of the most meritorious into which he has ever inquired. At the plant being operated by the Keystone company the management is dropping its stamps on \$40 gold ore, while the ledge from which it is being mined has been fathomed to a depth of 100) feet.

The Red Cloud presents a most interesting proposition, its ores affording an average of about 5 per cent mercury and \$18 gold, while in another channel occurs an ore which is maintaining an average of \$15 gold. The Campbell lead mines in the same region continue idle, owing to the presence of the state by which they are sweed in court. Over the region Mr. Joseph is quite enthusiastic, and while the camp has been productive of a great deal of wealth already, the output of the future, he believes, will greatly exceed that of the past. Mr. Joseph leaves for the hills again today. said Harry Joseph, the originator of the system, on his return from the south yes

DR. WOODRUFF RETURNS.

Tells of the Exchange and Its Work Down at Los Angeles.

a protracted absence, during which he did not a little to simplify the which he did not a little to simplify the work attendant upon the organization of the new mining exchange at Los Angeles, Dr. E. A. Woodruff came in from the South yesterday, and after two weeks devoted to local interests will depart again, his subsequent return to be with his family, which is now in the Southern metropolis. The new exchange has begin its activities in a manner that promises to stimulate interest in diggings throughout the Western country and cannot but result in infinite good, especially to those camps along the Salt Lake Route. Already it has taken a number of them under its nourishing wing and to their development is contributing quite freely. It is sending out much wealth to the encouragement of new discoveries that have been made within Nevada's gold-bearing belt, while California is eliciting not a little of its attention. The exchange has started out in a manner that promises to do much good, not only for the community in a general way, but for the entire Southern country, says Dr. Woodruff, and Utah's securities may rely upon warm support wherever they show themselves entitled to it. The doctor's many friends will be delighted to learn that he has returned in excellent health. work attendant upon the organization of

UNCLE SAM'S ORE SALES.

Nice Piece of Money Derived From Sixty-Ton Lot.

For two carloads of "second-class" ore the management of the Uncle Sam at Tintic was permitted yesterday to draw down a check for \$1200, the consignment consisting of about 60 tons. While this is characterized as a second-class ore, it would easily constitute a first-class from the average producer, and is done so simply because of the pronounced contrast between it and that of a much better quality. At present the company has at the sampler two carloads of concentrates, with a third in transit, and with connection with the new channel made on the 500-foot level, will undoubtedly be followed by a new record in June. The management is very much pleased with the condition of the property all throughout, while there is everything to indicate it will continue to improve as the present work advances.

NEWHOUSE AT HANNAPAH.

New Shaft Started and to Sink Rapidly to Ore Body.

Frank B. Work, superintendent of the Newhouse property at Hannapah, eighteen miles east of Tonopah, was in this week for supplies. Mr. Work states that ground was broken this week for the new double compartment working shaft which is to be sunk to tap the ledge which was opened up on the 250-foot level that was run from the old incline shaft, says the Tonopah Miner. The ore-shoot on the 250 is eighteen inches wide and 100 feet long, and gives average assays of 570. It is expected that this ore-shoot will increase in width and depth, and as the working shaft will be sunk as quickly as possible to the 500-foot point, it will not be long until this question is definitely determined. The inflow of water is now about 12,000 gallons a day, requiring about two days pumping per week to keep the sump clear. ground was broken this week for the new

AT SCOTTISH CHIEF.

Cross-Cut to the Main Contact Being Hurried by Company.

Quite exultant over progress that is being made in the crosscut on the 800-foot level, and through which he expects to connect with the contact and the main ore connect with the contact and the main ore bodies for which the search was origin-ated, W. J. Lawrence came down from the properties of the Scottish Chief company, out of Park City, Sunday. According to the survey, said he connection with the contact should be effected in the next fifty feet. Meanwhile he is ready to begin for-warding ores to the bins of the Markin-tosh sampler at Perk City as soon as the condition of the road shall bermit. He reports a carload of copper are now at the surface.

Macbeth's Movements.

Ravenel Macbeth eminent mining expert who has been in Goldfield for the past several days looking over the district, has returned to Builfrog says the Goldfield Sun. Mr. Macbeth will be in the southern camp for a week, when he will come back to Goldfield and again spend a week or more tooking into the resources of this camp. Mr. Macbeth represents capitalists, who, together with himself, are heavily interested in Idaho mining properties, in Builfrog claims, and may get into the Goldfield district.

Mining Notes. J. W. Cairns has returned from Los Angeles, whither he went on mining business.

Joseph Dederichs, the mechanical engineer, left for Idaho last night, and upon his return will devote much of his time to mine interests at Stockton.

W. C. Alexander, manager of the Black Dia-

THE PANAMAS ARE IN.

Just last week they came.

A little late, but they're here.

The demand East was so heavy our order was delayed some.

P++++++++++++++++++++

They're beauties, too. A little change from last season's shape

Prices lower, too-\$4.00, \$6.00, \$7.50, \$8.50, \$10.00, \$12.50, \$15.00.

teresta in his company.

H. N. Merwin, the mill builder, has returned from Arizona, where he superintended the construction of a plant on the properties of the Black Rock Mining company.

M. M. Johnson of the Newhouse staff departed for New York at moon yesterday on a dispatch requiring his attention there. It is not unlikely that before Mr. Johnson's return another big deal will have been consummated. Pieche Record: T. J. Montgomery returned from Salt Lake during the week and proceeded to the coal mines near Grassy Springs, where he has men at work sinking a shaft in view of striking a body of coal.

The friends of Manager C. W. Whitley of

The friends of Manager C. W. Whitley of the American Smelting and Refining com-pany will be gratified to learn that his con-dition is improving so rapidly that he prom-less to reappear in the offices in a short time.

A letter from the foreman of the Odin mines it Park City during the day assures Judge inyder that the larest development there is roving up as desired, and that everything oreticles an important disclosure in a short lare.

The delinquent sale of shares in the Lower Mammoth to satisfy an assessment of 5 cents, with a total of \$7500, brought out very few. It will be graffying to those who made this contribution to learn that the outlook at the Tinic property has not been so assuring in many years.

many years.

Louis S. Cates, manager of the Boston Con's properties at Bingham, came in from camp again last night to confer with his associates at the general offices. Mr. Cates says that he has instructions from the East to rush the Teck tunnel in the perphyry, and to do same with all the men and machine drills for which he can find room.

Chamberlain's Cough Remedy the Very Best. "I have been using Chamberlain's

Cough Remedy and want to say it is the best cough medicine I have ever taken," says George L. Chubb, a merchant of Harlan, Mich. There is no question about its being the best, as it will cure a cough or cold in less time than any other treatment. It should always be kept in the house ready for instant use, for a cold can be cured in much less time when promptly treated. For sale by all leading druggists.
